引文與參考書目

Introduction

Citation-引文(註)

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccups, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation.

Acupuncture or acupressure at the Neiguan (P6) point, located on the inner side of the forearm, in the pericardium meridian, has been shown to have anti-nauseant effects (Ho et al., 1987, 1988, 1989a and b; Ho et al., 1989; De Azevedo et al., 1994; Fan et al., 1994; Harmon et al., 2000). These effects are related to autonomic nervous activity (Morrogh et al., 1997). It is therefore speculated that the autonomic nervous activity at the Neiguan (P6) point was performed.

Heart rate variability analysis is a useful non-invasive method for the assessment of autonomic nervous modulation of heart rate. Some diseases are associated with depressed vagal modulation, and the restoration of vagal modulation is associated with the improvement

[PDF] Species contributions to PM2. 5 mass concentrations: Revisiting common assumptions for estimating organic mass

BJ Turpin, HJ Lim - *Aerosol Science & Technology*, 2001 - Taylor & Francis

In virtually all published literature wherein closure between gravimetric and chemical measurements is tested, the concentration of particulate matter is often assumed to be equal to the measured concentration of organic carbon (microgram per cubic meter).

被引用 1401 次 相關文章 全部共 5 個版本
